

**AMENDMENTS TO THE CLAIMS**

1. (Currently amended) A jellied pharmaceutical composition for oral administration, comprising a 5-HT<sub>3</sub> receptor antagonist, kappa (κ)-carrageenan and/or iota (ι)-carrageenan, locust bean gum, sodium polyacrylatea-gelatinizing agent, and water, wherein the composition has a pH of 7 or less.
2. (Original) The pharmaceutical composition for oral administration according to claim 1, further comprising a reductant.
3. (Previously presented) The pharmaceutical composition for oral administration according to claim 1, wherein the 5-HT<sub>3</sub> receptor antagonist is azasetron, granisetron, tropisetron, ramosetron or ondansetron, or an organic acid salt or inorganic acid salt thereof.
- 4-8. (Canceled)
